

GAN YONG HAO

Software Engineer | Backend & Fintech Systems

Subang Jaya, Malaysia | +6019-649 6681 | ganyonghao1@gmail.com | [LinkedIn Profile](#)

PROFESSIONAL SUMMARY

Backend Software Engineer with 4+ years of experience in mission-critical financial systems. Skilled in Java/Spring Boot microservices, blockchain platforms (XRP Ledger, Hyperledger Fabric), SWIFT ISO 20022 MT/MX messaging, and CI/CD automation. Proven track record delivering secure, high-availability systems for RENTAS real-time settlement infrastructure and Central Bank Digital Currency research.

TECHNICAL SKILLS

Languages & Frameworks: Java, COBOL, Spring Boot, RESTful APIs, Microservices Architecture, Shell Scripting (Bash)

Blockchain: XRP Ledger (XRPL), Hyperledger Fabric, Smart Contracts, Decentralized Storage

Messaging Standards: SWIFT ISO 20022, MT/MX Message Translation

DevOps & CI/CD: Bitbucket, ArgoCD, Harbor, Kubernetes-based Deployments, Pipeline Automation

Security: Utimaco Atalla Hardware Security Module (HSM) Integration, PII Encryption, Cryptographic Signing

Systems & Platforms: HP Tandem NonStop, TACL Scripting, High-Availability Production Support

Practices: QA Collaboration, Defect Triage, Zero-Regression Release Management

PROFESSIONAL EXPERIENCE

FINEXUS Group | Kuala Lumpur, Malaysia

Full-time · 4 yrs 5 mos

Software Engineer II

Jan 2024 – Present

- Provide 24/7 production and testing environment support for RENTAS (Real-Time Electronic Transfer of Funds and Securities), a COBOL-based system, ensuring maximum system stability, uptime, and strict regulatory compliance.
- Develop backend services for Wholesale Central Bank Digital Currency (wCBDC) research using Spring Boot and the XRP Ledger (XRPL) blockchain for secure API integration and account storage.
- Engineer a Spring Boot API that enables bank system to seamlessly integrate with the RENTAS system.
- Build and optimize CI/CD pipelines using Bitbucket, ArgoCD, and Harbor, reducing deployment downtime and improving release reliability.
- Partner closely with QA teams to identify, test, and resolve critical defects, ensuring high-quality, zero-regression software releases.
- Architect and develop a secure microservice to process RENTAS transaction messages, integrating a Utimaco Atalla Hardware Security Module (HSM) to encrypt and safeguard Personally Identifiable Information (PII).
- Involved in SWIFT ISO 20022 MT/MX message translation for the RENTAS system, supporting migration to modern financial messaging standards.

Software Engineer

Feb 2022 – Dec 2023

- Maintained and enhanced the RENTAS i-LINK application using Java, implementing feature updates and performance fixes aligned with evolving project requirements.
- Investigated and debugged critical system issues within high-availability HP Tandem NonStop environments, using TACL (Tandem Advanced Command Language) for troubleshooting and system scripting.
- Designed and developed a Spring Boot API for secure cryptographic PDF signing and decentralized document storage leveraging Hyperledger Fabric blockchain.
- Delivered 24/7 mission-critical production and testing environment support for the RENTAS system, safeguarding operational continuity and platform stability.

EDUCATION

Bachelor of Computer Science (Honours)

2022

Universiti Tunku Abdul Rahman (UTAR)

CGPA: 3.58 / 4.00
